

# Paul Kiragu Mburu

Software Developer | JavaScript · Python · Node.js · REST APIs · Google Cloud

paulkiragumburu@gmail.com · +254 798 465 147 · Nairobi, Kenya · [github.com/paulkiragu](https://github.com/paulkiragu) · [linkedin.com/in/paul-mburu-088264373](https://linkedin.com/in/paul-mburu-088264373)

---

## PROFILE

---

Software Developer with a strong foundation in JavaScript, Python, and Node.js, and hands-on experience building and deploying full-stack and backend systems. I have shipped a live e-commerce platform, contributed to AI-powered products, and worked across freelance and startup environments making me comfortable with fast-moving, remote-first teams. I care about writing clean, maintainable code and I understand how software interacts with data pipelines and ML systems, which makes me a natural fit for Weather-AI Labs' technical stack.

## WORK EXPERIENCE

---

### Backend Developer | [AfyaBora AI](#) | 2026

- Designed and built RESTful API endpoints to support AI-driven health features, integrating Python-based ML logic with a Node.js backend.
- Worked closely with the ML team to ensure clean data flow between the API layer and model inference pipelines, gaining direct experience with AI product architecture.
- Managed cloud deployment on Google Cloud Platform, including service configuration, environment variables, and production monitoring.
- Collaborated asynchronously in a remote-first startup environment — delivered features on time while managing scope changes and technical feedback.

### Website Developer | [Bylin Organisation](#) | 2025 – 2026

- Built and maintained the organisation's web presence using JavaScript (ES6+) and Node.js, delivering a responsive, performant site aligned with brand requirements.
- Integrated REST APIs for dynamic content and third-party services, handling auth flows, data fetching, and error states cleanly.
- Owned the full delivery lifecycle from requirements gathering through deployment demonstrating the self-management needed for a remote role.
- Documented codebase and handed over clean, readable code to reduce onboarding friction for future contributors.

### Freelance Software Developer | [Independent](#) | 2023 – 2024

- Delivered web and backend projects for multiple clients across e-commerce, service listings, and data dashboards, primarily using JavaScript, Python, and REST APIs.
- Managed project scopes, client communication, and deployment independently — building the self-discipline and async communication habits that remote work demands.
- Built custom integrations including payment APIs and third-party data feeds, adapting quickly to different client stacks and requirements.

### IT Support Attaché | [Embu College](#) | May – Aug 2025

- Provided first-line technical support in a live institutional environment; reinforced habits of documentation, process adherence, and systematic problem diagnosis.

## KEY PROJECTS

---

### OrbitShop E-commerce Platform · [orbitshop.co.ke](https://orbitshop.co.ke) · 2025

- Built and launched a live retail platform end-to-end, implementing product catalogues, cart logic, payment integration, and an admin dashboard.
- Architected RESTful API layer in Node.js and handled cloud hosting directly applicable to building and

scaling services at Weather-AI Labs.

### **Precision Farming AI — Crop Prediction System** · *University Project*

- Designed the full ML data pipeline: collection, cleaning, preprocessing, and model training with scikit-learn — giving me insight into how software quality affects AI output.
- Handled geolocation and sensor data edge cases, a skill transferable to weather data processing.

## **TECHNICAL SKILLS**

---

- **Languages:** JavaScript (ES6+), Python, SQL
- **Backend & APIs:** Node.js, REST API design & integration, Express.js
- **Cloud & DevOps:** Google Cloud Platform, deployment pipelines, environment configuration
- **AI / ML:** scikit-learn, data pipelines, annotation tooling (Labelbox), downstream ML impact
- **Tools:** Git, GitHub, VS Code, Postman, Linux/Bash
- **Soft Skills:** Remote-first async communication, self-managed delivery, documentation, edge-case thinking

## **EDUCATION**

---

### **BSc Computer Science** · *University of Embu, Kenya* · 2022 – 2026

Relevant coursework: Data Structures & Algorithms, Artificial Intelligence, Databases, Software Engineering, Computer Networks

### **Software Engineering Certificate** · *PLP Africa* · 2025

## **AWARDS**

---

- First Runners-Up, Karatina University Hackathon 2025 — delivered a working software solution under timed conditions, competing across multiple universities.

## **REFEREES**

---

*available upon request.*
